

## Boom Lift Training Glendale

Boom Lift Training Glendale - Aerial platforms or likewise known as elevated work platforms are devices that allow workers to carry out tasks and duties at elevated heights which will not be otherwise reachable. There are various aerial lifts available to perform various applications under different site conditions. If operated carelessly, elevated work platforms could lead to death or serious injury. The most common causes of related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators should be trained completely in techniques to be able to avoid accidents while operating lifts.

The Aerial Lift Safety program offers needed resources to be able to help people required to learn how to operate these devices more effectively. Through the program, participants would be given thorough instruction. Kinds of lift covered include scissor, articulating and boom supported aerial lifts. The video presents the correct methods operators must follow. Instruction focuses on protection against falls, pre-operational check, stability of the device and safe driving procedures.

The course addresses equipment reliability and employee safety. All instructional materials are compliant with government, provincial and state agency regulations and requirements. Training methods and course management will be taught. The trainer would also become well versed in the technical aspects of aerial lift safety.

Parts of the Boom Lift Training program comprise both practical training and classroom training. Both sessions must be finished successfully for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms could be positioned completely beyond the base of the equipment. The theoretical component of the training is nearly the same for both types. The practical training component can be completed sooner if only one type of machinery is utilized.

### Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to make more efficient use of elevating work platforms while decreasing the possibilities of an expensive accident in the workplace. Trainees will review of business policies and applicable rules, talk about Due Diligence, study Criminal Negligence and consequences to employers, trainers, supervisors and employees. Participants will review equipment features, operating procedures, stability, parking and charging/fueling procedures. Site-specific safety concerns will be addressed.
