

Fantuzzi Parts

The Fantuzzi Company offers an abundance of material handling equipment and heavy machinery. The fleet consists of a number of machines dedicated to unloading, loading and transporting goods. The railway freight sector and the port authority require a big portion of their equipment.

Initially beginning in the 1960s as a zoo-technical and agricultural equipment manufacturer in the province of Reggio Emilia, Fantuzzi has grown to become a world leader in the heavy equipment industry. Now a global company, the company gradually expanded after welcoming successful advancements and overcoming a variety of technological challenges. Luciano Fantuzzi is the President and founder of the group. In 1967, the group began making side lift trucks specifically for transporting timber and extended materials such as metal rods that weighed between three to 5 tonnes. The firm enjoyed frequent orders and completed 60 units in the second year; which was five times greater than their first year sales.

Within a short amount of time, the company grew exponentially. In 1968, a heavy-duty side-loader British model that was capable of lifting up to 32 tonnes inspired Luciano Fantuzzi. He wanted to create something that had more power with a similar style. After completing this machine and reaching his goal, Luciano began receiving orders from French Railways, Fiat and many others. Today, the Fantuzzi Group Italy has a number of manufacturing plants throughout the world including Italy, Germany and China. The firm proudly exports to 162 countries.

Fantuzzi has kindly offered its patented knowledge with nations all around the globe with the goal of making the material handling, heavy equipment and transportation industries more convenient. Advancements and digital technology are serving to revolutionize the industry.
